ALTNIC

Alternative Nicotine Technology

TWO FORMULATIONS
ONE TECHNOLOGY

AltNic Product Overview

AltNic is an alternative nicotine formulation designed to deliver significantly higher potency compared with traditional nicotine. This allows for lower volume usage while maintaining the desired nicotine effect. The nicotine used in AltNic products is produced synthetically, without the use of tobacco plants, ensuring consistent purity and eliminating reliance on tobacco-derived raw materials.

We also offer sAltNic, the salt-based variant of AltNic, formulated to provide a smoother inhalation experience with reduced throat irritation compared with conventional nicotine products.

Additionally, 6-Methyl interacts with nicotine receptors in a manner similar to traditional nicotine, offering comparable user satisfaction while being associated with a lower reported toxicity profile.

Mixing Guidelines for Shortfills

AltNic boosters are clearly labeled with effect strengths of 18 mg, 36 mg, and 72 mg, allowing straightforward mixing into shortfill e-liquids.

Choose Your Target Strength

These guidelines are intended to simplify preparation while ensuring consistent nicotine strength across different shortfill volumes.

LIGHT	**BALANCED**	**STRONG**	**LIGHT**	**BALANCED**	**STRONG**
3 mg final strength	*6 mg final strength*	*12 mg final strength*	*1,5 mg final strength*	*3 mg final strength*	*6 mg final strength*
Shortfill **50 ml**	Shortfill **50 ml**	Shortfill **50 ml**	Shortfill **100 ml**	Shortfill **100 ml**	Shortfill **100 ml**
Use 18 mg booster	Use 36 mg booster	Use 72 mg booster	Use 18 mg booster	Use 36 mg booster	Use 72 mg booster
