Installation Instructions for Active Intake & Exhaust Eliminator Kit

CAUTION: CAREFULLY READ INSTRUCTIONS BEFORE PROCEEDING. NOT LEGAL FOR SALE OR USE IN CALIFORNIA OR ON ANY POLLUTION CONTROLLED VEHICLES.

OVERVIEW

Late model European spec Harley-Davidson models are equipped with active intake and exhaust systems. For off road racing, installation of some aftermarket air filters and exhausts require removal of the original equipment active systems. To avoid setting a diagnostic trouble code (DTC) when removing the active systems, you can install our active intake and exhaust eliminator kit P/N 18003.

INSTALLATION

To avoid setting a trouble code, make sure the ignition switch is off and the run/stop switch is in the stop position before proceeding.

Disconnect the active intake and exhaust systems. The two terminal active intake connector is underneath the air filter cover. Install the two terminal active intake eliminator onto the original equipment harness. The five terminal active exhaust connector is located at the exhaust servo motor (generally on the left side of the motorcycle). Install the two terminal active intake eliminator onto the original equipment harness.
